## Connect your people

Jami is a universal communication platform which preserves users' privacy and freedoms.

Designed both for the general public and the industry, Jami provides a free, secure and multiplatform communication tool built on a distributed architecture requiring no authority nor central server.

- > Encrypted audio/video/messaging communications
- > Conferencing, Screen sharing, call recording
- > Windows, Android, AndroidTV, MacOS, iOS, Linux
- > Ethereum Blockchain as a distributed username registry

Download the application on the stores

## Connect your objects

Jami's core is based on OpenDHT, a secure and autonomous distributed system for IoT and connected devices.

Jami establishes secure P2P streams between connected systems, without requiring infrastructure thanks to its cloudless architecture. It uses SIP and RTP standards for stream establishment and OpenDHT for discovery and data exchange.

- > P2P distributed data storage and transfer
- > Published under GPLv3+ license
- > Autonomous configuration
- > Secured with end-to-end encryption
